The Architecture Billings Index (ABI) is a diffusion index derived from the monthly Work-on-the-Boards survey, conducted by the AIA Economics & Market Research Group. The ABI serves as a leading economic indicator that leads nonresidential construction activity by approximately 9-12 months. The survey panel asks participants to check the proportion of important projects by rating their billings. The numbers represent an index value for each month. An index value of 50 represents no change. If billings for the previous month were at least 50, it indicates an increase in billings from the previous month and a score below 50 indicates a decline in billings from the previous month.

**National**

Architectures firms billings decline in June, as indicators of future work weaken

---

**National**

Business conditions improve modestly at firms with a Commercial/Industrial specialization

---

**Regional**

Billings soften further in all regions except South

---

**Sector**

Business conditions improve modestly at firms with a Commercial/Industrial specialization

---

**Practice**

Most firms that have had negative impacts from tariff-related issues have seen rising construction costs for projects

---
